De-Snaring Report for April, 2012

Snares Collected

Snare Type	Snare Size	Snare Description	No. Confiscated
Thin Wire	Small	Line	7
Thin Wire	Medium	Cluster	38

Total Snares Collected: 45

Chyulu Team

De-Snaring Report for April, 2012

Monthly Summary

The Chyulu Team was based at Kenze during the month of April, the teams continued with their primary responsibility of protecting the Kibwezi Forest, thus ensuring that it remains free from human interferences which cause the forests degradation. On several occasions during the course of the month, the team patrolled the neighbouring protected areas, notably Rea Vipingo Sisal Plantation (NDWA) and the University of Nairobi, Kibwezi field research station ranch.

Most snares lifted during the months work were collected from NDWA area and the forest's unfenced area. The Team managed to apprehend a high number of offenders, most of whom being school going children, currently on holiday. As they were minors they were turned over to the local chief for punishment. Several charcoal kilns were destroyed especially from the University Ranch.

No community work was carried out this month because schools were closed for holiday and the team was on a break between the 16th to the 30th of April. The community project shall resume in May, when the schools reopen for their second term.
